LUBRICATING GREASES

# STEEL INDUSTRY

 **CORRECT LUBRICATION KEYS**

The proper lubrication of the different infrastructures of the steel industry is of vital importance. Not only there is an obvious beneficial impact on the maintenance costs, but a big improvement on manufacturing equipment, continuous steel casting and hot-cold lamination equipment functioning.

**Brugarolas** has developed special greases that can deal with high temperatures and loads, continuous presence of cooling water, high amounts of polluting particles, laminating particles, rust, etc.. All these greases share the following common specifications.

- High water resistance
- Excellent thermal performance
- Very high resistance to loads
- High sealing properties
- High pumpability

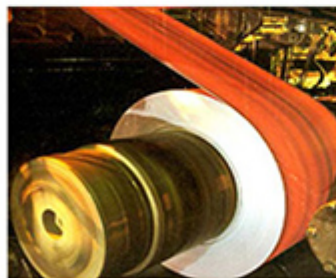

**CONTINUOUS CASTING (LUBRICATING GREASES)**

Lubricating grease	NLGI	Thickener	Base oil	Viscosity (cSt)	Welding load (Kg)
G. BESLUX KOMPLEX M-1/2	1/2	Polyurea	Mineral	220	>300
G. BESLUX KOMPLEX SC	1	Polyurea	Semi-synthetic	400	>400
G. BESLUX SULPLEX H-1 PLUS	1	Calcium sulphonate	Mineral	420	>700

**HOT ROLLING EQUIPMENT (LUBRICATING GREASES)**

Lubricating grease	NLGI	Thickener	Base oil	Viscosity (cSt)	Welding load (Kg)
G.A. PLEX H-1	1	Lithium complex	Mineral	460	>400
G. BESLUX KOMPLEX M-1/2	1/2	Polyurea	Mineral	220	>300
G. BESLUX SULPLEX H-1/2 PLUS	1	Calcium sulphonate	Mineral	460	>700
